

MAHER NOAMAN BAKOUR

Dubai, UAE | +971 50 727 0951 | mnoaman6@gmail.com | Egyptian | LinkedIn: [Add your LinkedIn URL]

EDUCATION

BSc in Computer Science (Final Year Student)

American University

Diploma in Data Science and Artificial Intelligence

GTEC Institute

PROFESSIONAL EXPERIENCE

Administrative Support / Security Guard

We One Security - UAE (Bank Site)

2024 – Present

- Managed daily attendance logs and visitor entry records using Excel database systems
- Prepared administrative reports using Excel and Power BI for data visualization
- Assisted supervisors with data tracking and documentation of security incidents
- Analyzed visitor patterns to optimize security staff scheduling and resource allocation

Security Guard

UAE

2023 – 2024

- Maintained detailed logs of staff and visitor movements using digital tracking systems
- Supported access control and reporting activities with data entry and analysis
- Generated weekly security reports highlighting key metrics and potential concerns

Welfare Officer

Qatar

2018 – 2020

- Coordinated staff wellbeing programs and safety initiatives using data-driven approaches
- Collected and organized data related to employee attendance and complaints
- Analyzed trends in employee satisfaction and created reports for management

Security Guard

Himaya Security - Qatar

2015 – 2018

- Monitored site security, recorded daily logs, and submitted reports to the control room
- Documented security incidents and maintained accurate records for analysis

TECHNICAL SKILLS

Data Analysis: Excel, Power BI, Google Sheets, Data Cleaning, Statistical Analysis

Programming Languages: Python, SQL, SAS

Data Visualization: Power BI, Matplotlib, Tableau

Database Management: SQL, SQLite, Data Modeling

IT Skills: System Troubleshooting, Networking Basics

Software Engineering: Version Control, Agile, SDLC

CERTIFICATIONS

- Google Data Analytics
- IBM Data Science
- IBM Data Analytics
- Google IT Support
- SAS Programming
- Advanced Excel
- Power BI Analyst
- Software Engineering Fundamentals

DATA ANALYSIS PROJECTS

Bank Visitor & Staff Reporting Dashboard

Tools: Excel, Power BI, Python

- Collected and cleaned attendance and visitor data from daily reports using Excel and Python
- Built interactive dashboards in Power BI for bank supervisors to monitor entry trends and staff distribution
- Automated weekly report generation using Excel and basic Python scripts for data processing
- Resulted in more efficient tracking and improved administrative response time by 40%

Customer Behavior Analysis for Retail Security

Tools: Python, Pandas, Matplotlib, Excel

- Analyzed 6 months of store security footage data to identify customer traffic patterns using Python and Pandas
- Created predictive models to optimize security staff scheduling based on peak hours
- Developed visualization dashboards showing correlation between store sections and security incidents
- Reduced security response time by 35% through data-driven staff positioning

Employee Attendance Pattern Analysis

Tools: SQL, Power BI, Excel

- Designed a database system to track employee attendance across multiple security sites
- Implemented SQL queries to identify patterns in late arrivals and absences
- Created Power BI reports for management to visualize attendance trends by location and time period
- Resulted in 20% improvement in staff punctuality through targeted interventions based on data analysis

Security Incident Reporting System

Tools: Python, SQLite, Streamlit

- Developed a web-based application for security guards to log incidents digitally using Python and Streamlit
- Implemented data validation and categorization features to ensure consistent reporting
- Created automated weekly and monthly summary reports with statistical analysis
- Reduced report processing time by 60% and improved data accuracy by 45%

Visitor Flow Optimization for Corporate Buildings

Tools: Excel, Python, Tableau

- Collected and analyzed visitor check-in/check-out data from multiple corporate buildings
- Identified bottlenecks in visitor processing during peak hours through data visualization
- Created simulation models to test different check-in procedures and staffing levels
- Implemented recommendations that reduced average visitor wait time by 25% based on data analysis

PROFESSIONAL SUMMARY

Data-focused security professional with experience in analyzing attendance patterns, visitor flows, and security incidents. Skilled in using Excel, Power BI, and Python to transform raw security data into actionable insights. Demonstrated ability to improve operational efficiency through data-driven decision making and automated reporting systems.
