EDUCATION

BSc in Computer Science (Final Year Student)

American University

Diploma in Data Science and Artificial Intelligence

GTEC Institute

EXPERIENCE

Administrative Support / Security Guard - We One

Security (Bank Site)

2024 – Present

- Managed daily attendance logs and visitor entry records
- Prepared administrative reports using Excel and Power BI
- Assisted supervisors with data tracking and documentation

Security Guard - UAE

2023 – 2024

- Maintained detailed logs of staff and visitor movements
- Supported access control and reporting activities

Welfare Officer - Qatar

2018 – 2020

- Coordinated staff wellbeing programs and safety initiatives
- Collected and organized data related to employee attendance

Security Guard - Himaya Security, Qatar

2015 – 2018

- Monitored site security, recorded daily logs, and submitted reports

TECHNICAL SKILLS

Data Analysis: Excel, Power BI, Google Sheets **Programming:** Python, SQL, SAS

Data Visualization: Power BI, Matplotlib, Tableau **Database:** SQL, SQLite

Data Cleaning & Statistical Analysis **IT Skills:** Troubleshooting, Networking

Software Engineering: Version Control, Agile, SDLC

PROJECTS

Bank Visitor & Staff Reporting Dashboard (Excel, Power BI, Python)

- Collected and cleaned attendance and visitor data from daily reports
- Built interactive dashboards for supervisors to monitor entry trends
- Automated weekly report generation using Excel and Python scripts
- Improved tracking efficiency and administrative response time

Customer Behavior Analysis for Retail Security (Python, Pandas,

Matplotlib)

- Analyzed 6 months of store security footage data to identify patterns
- Created predictive models to optimize security staff scheduling
- Reduced security response time by 35% through data-driven positioning

Employee Attendance Pattern Analysis (SQL, Power BI, Excel)

- Designed database system to track employee attendance across sites
- Created Power BI reports to visualize attendance trends by location
- Improved staff punctuality by 20% through targeted interventions

Security Incident Reporting System (Python, SQLite, Streamlit)

- Developed web application for security guards to log incidents digitally
- Created automated weekly and monthly summary reports
- Reduced report processing time by 60% and improved accuracy by 45%

Visitor Flow Optimization (Excel, Python, Tableau)

- Analyzed visitor check-in/check-out data from corporate buildings
- Created simulation models to test different check-in procedures
- Reduced average visitor wait time by 25% through recommendations
